Scrape the Movie Reviews

For this Analysis I have scraped the Biographic Movie reviews from IMDB Dataset for the Movie whose release year is greater than or equal to 2010.

```
In [2]: # Set the Header Details for Movie review File
header1 = ["Movie_Name", "Review_Title", "Review_User", "Review_content", "Rating"]
myfile1 = open("Review.csv", 'w', newline="", encoding='utf-8')
csvwriter = csv.writer(myfile1, delimiter=',')
csvwriter.writerow(header1)
myfile1.close()
```

```
In [3]: # Set up the Urls for the scraping
base_url="https://www.imdb.com"
review_concat="?ref_=undefined&paginationKey="
review_ajax = "/_ajax"
next_url = "https://www.imdb.com/title/tt10618286/reviews/_ajax?ref_=undefined&paginati
```

From IMDB Website have already scraped all the biographic Movies along with the

year,Genre, Director, runtime, rating, metascore, review_url. In the Some of the Movie doesnt have release year. Filter out the Movie which dont have proper year and grouped all the movies into a year wise dataframe which in turn used to scrape the movie reviews

```

Classification Report shows the average accuracy which is **0.67**. This is a good result compared to the amount of data used for training. predict function can be used on the model object to get the predicted class for the test data. BOW Vectorization ACCURACY = 72%

Classification Report shows the average accuracy which is **0.72**. This is a very good result compared to the amount of data used for training and also to the previous vectorisation. predict function can be used on the model object to get the predicted class for the test data. Accuracy for positive and negative sentiments is better than neutral which makes sense as it is hard to distinguish the neutral comments compared to commonly used words in the positive and negative sentiment.

Compared to TFIDF, word2vec vectorisation the accuracy is increased. And also by comparing the performance BOW vectorisation took less time for fit and test the model.

Method 4 - Document Embeddings (Doc2Vec)

Doc2vec ACCURACY = 64%

Classification Report shows the average accuracy which is **0.64**. This is a very good result compared to the amount of data used for training and also to the previous vectorisation. predict function can be used on the model object to get the predicted class for the test data. Accuracy for positive and

Compared to TFIDF, word2vec, BOW vectorisation the accuracy is increased. And also by comparing the performance Doc2vec vectorisation took less time for fit and test the model.

Conclusion:

Based on my Text analysis related to Biographic movie I come to conclusion that BOW Vectorization and Doc2Vec Document Embedding will provide a great accuracy in predicting the test Data . At the same Vectorisation took less time for training and test the model.
